

Jean-Pierre Lasota-Hirszowicz is Research Director Emeritus at the Institute for Astrophysics in Paris and Professor at the Nicolaus Copernicus Astronomical Center in Warsaw. He is a theoretical physicist and astrophysicist who works mainly on the

physics of compact bodies, accretion theory and its application to interacting binary systems and active galactic nuclei. He was a member of several committees supervising the construction of the gravitational-wave detector Virgo and a scientific advisor to the president of the French research agency CNRS. In 2012 he received the Grand Prix Felix Robin of the French Physics Society for his work.
